⚒ INFRASTRUCTURE PROJECTS

As part of the passenger information display and security system network upgrades, Pod-Trak were engaged to undertake multidiscipline works throughout all areas of Heathrow Airport on behalf of Firstco.

The works included the upgrade of existing infrastructure including fire alarm systems, the installation of new passenger information displays & new CCTV cameras. In addition to the construction scope, Pod-Trak also supplied all Safe Systems of Work and safety critical resource when working in the rail environment for ourselves and all other contractors engaged on the project.

The following scope was undertaken as part of the project:

• Installation, termination & testing of new fibre back bone.

• Installation, termination & testing of new structured cabling network for CCTV and Information displays.

• Installation of new cabinets and power supply

• Installation of new CCTV cameras and passenger Information displays

• New PA/VA system installation

• Project management support

• SSOW's and safety critical staff

All works were undertaken by our skilled teams with minimal disruption to Heathrow Airport and the passengers that use the Airport on a daily basis. The multidiscipline capability was key to the successful delivery of the works.

New installation of passenger display
