MANCHESTER**

North West Electrification (NWEF) Phase 2

Pod-Trak were approached by Balfour Beatty Rail in July 2014 to assist with the installation of new OLE on the Liverpool to Manchester and Liverpool to Wigan routes.

The series 2 equipment was supplied free issue by BBR and installed by Pod-Trak teams working on our RRV MEWPs.

Core works included SPS installation, wiring and final registration.

Critical tie-ins to existing electrification at Edge Hill and the West Coast Mainline were all carried out by Pod-trak. All plant moves between sites were managed and carried out in-house.
